Risk indicator  
Lower risk

Higher risk

1	2	3	4	5	6	7
---	---	---	---	---	---	---

The risk indicator is based on the assumption that you will hold the product for 5 years.

If you cash in the investment early, the actual risk may differ significantly and you may get back less.  
The summary risk indicator is a guide to the level of risk of this product compared to other products. It shows how likely it is that the product will lose money because of movements in the markets or because we are not able to pay you.

We have classified this product as 3 out of 7, which is a medium-low risk class. This rates the potential losses from future performance at a medium-low level, and poor market conditions are unlikely to impact our capacity to pay you.

**Please be aware of currency risk** if your reference currency differs from the currency of the product. You may receive payments in a different currency, so the final return you will get depends on the exchange rate between the two currencies. This risk is not considered in the indicator shown above.

Other risks not included in the risk indicator may be materially relevant:

- Liquidity risk
- Operational risks

Please see the sales prospectus for further information.

This product does not include protection against future market developments, so you could lose all or part of the capital invested.

## Performance Scenarios

## What are the costs?

The person advising on or selling you this product may charge you other costs. If so, this person will provide you with information about these costs and how they affect your investment.

### Costs over time

The tables show the amounts that are taken from your investment to cover different types of costs. These amounts depend on how much you invest, how long you hold the product and how well the product performs, if applicable. The amounts shown here are illustrations based on an example investment amount and different possible investment periods.

We have assumed:

- In the first year you would get back the amount that you invested (0% annual return). For the other holding periods we have assumed the product performs as shown in the moderate scenario.
- 10,000 EUR will be invested.

	If you exit after 1 year	If you exit after 5 years
<b>Total costs</b>	697 EUR	1,805 EUR
<b>Annual cost impact (*)</b>	7.0%	3.2% each year

(\*) This illustrates how costs reduce your return each year over the holding period. For example it shows that if you exit at the recommended holding period your average return per year is projected to be 4.7 % before costs and 1.5 % after costs.

We may share part of the costs with the person selling you the product to cover the services they provide to you. They will inform you of the amount.
